International Journal for Research Trends and Innovation (www.ijrti.org) 356 RESEARCH PAPER ON ARTIFICIAL INTELLIGENCE & ITS APPLICATIONS Prof. Neha Saini Assistant Professor in Department of Computer Science & IT SDAM College Dinanagar ABSTRACT – It is the science and engineering of making intelligent machines, especially intelligent computer programs. It is related to the similar task of using computers to understand human intelligence, but AI does not have to confine itself to methods that are biologically observable. While no consensual definition of Artificial Intelligence (AI) exists, AI is broadly characteriz ed as the study of computa tions that allow for perception, reason and action. Today, the amount of data that is generated, by both humans and machines, far outpaces humans' ability to absorb, interpret, and make complex decisions based on that data. Artificial intelligence forms th e basis for all computer learning and is the future of all complex decision making. This paper examines features of artificial

Insights — IJRTI2304061.pdf
Document contains ~2,616 words across 170 sentences
Average sentence length: 15 words
Vocabulary richness: 795 unique terms
Top topics: intelligence, artificial, learning, which, human, machine
Estimated reading time: ~14 minutes
Chunk coverage: 5 searchable segments
FAQs — IJRTI2304061.pdf
Q: What are confine itself to methods that ? A: confine itself to methods that are biologically observable.
Q: What is the amount of data that? A: the amount of data that is generated, by both humans and machines, far outpaces humans
Q: What is s for all computer learning and? A: s for all computer learning and is the future of all complex decision making.
Q: What is es where an intelligent
